

Newforma Project Center

Project information management software for the way you work

Newforma[®] Project Center is the core of the Newforma project information management enterprise solution. It reduces risk and saves time in the management of email, searches, markups, meeting minutes, project files, record documents, project images, file transfers, action items and more. By improving client service, it strengthens your brand.

Works the way you work

Newforma Project Center differs from other project information management systems. It demands no significant change to your work processes, integrates with your existing email system and IT infrastructure, and recognizes your need to share information in different ways with different partners, depending on levels of trust. It adapts to your best practices.

Find information on your network

The Newforma Project Center Server indexes the project information on your network to return fast, comprehensive results via the Search function. It finds terms in over 200 industry formats, including email and email attachments, CAD, PDF, DWF and Microsoft Office files, external references, ZIP files, image properties, and the object properties of DWG, DWF and IFC files. Search supports legal discovery and knowledge management initiatives. Search across all projects or selected projects; even those pre-dating your Newforma implementation.

Compare drawing files

The Compare functionality graphically identifies changes between iterative sets of drawings, including DWG, DGN and PDF files.

File and find email

Newforma Project Center makes it drag-and-drop easy to file messages to a project from any standard email client. At the Project Email activity center, it's a simple matter to sort and filter for quick retrieval. Outlook email users have the added advantage of the Newforma Add-in for Microsoft[®] Office[®] Outlook[®], which allows you to relate emails to action items, RFIs, and submittals without leaving your inbox.

Create and manage action items

The Action Items activity center engages the power of the extended project team to track and resolve critical issues. Team members can create action items while answering email in their Microsoft Outlook inbox; while reviewing a drawing, BIM model or PDF in the Newforma Viewer; or from any other activity center.

View, mark up and track files

Newforma Viewer allows you to view graphics files and mark them up with easy-to-use annotation and drawing tools. You can browse, preview, add comments and stamp any markup session created on the project, providing a permanent audit trail of the decisions in a design or construction review workflow.

Collaborate without FTP shortcomings

Newforma[®] Info Exchange provides an easy-to-use, secure means of distributing information that is as easy as email, but without the file size limitations of email, the security and administration shortcomings of FTP, or the expense of project extranets. For travelling employees and external company team members, it also provides secure web access to much of the information managed in Newforma Project Center, including record document revisions, synchronized project folders, action items and more.

PERKINS + WILL

"We expect, in short order, to realize at least a five-fold ROI and to simplify key aspects of the project environment for our users. Newforma Project Center provides an easy-to-use project environment that helps us proactively manage project data and communications with minimal effort – leaving valuable time for more creative pursuits."

Rich Nitzsche
Chief Information Officer

POPULOUS[®]

DRAWING PEOPLE TOGETHER[™]

"The Newforma search-sort-filter process is like Google[™] for project information!"

Tom Usher
Senior Architect

BergerABAM

"Our business is more competitive than ever. To make sure clients continue to give us repeat business, we've invested in Newforma Project Center software to shorten response times and reduce the risk of mistakes."

Arnie Rusten
President and Chief Executive Officer

Features, continued

Improve revision management

The Document Control activity center standardizes the revision management of record

documents issued for review, permitting and construction. All team members benefit from the ability to browse and preview recent drawing revisions, and to compare them to previously issued revisions. It also integrates with Autodesk® Revit®, creates a customizable document register report, and supports remote access to drawing revisions via Newforma Info Exchange and Newforma Mobile.

Manage project images with ease

The Project Images activity center uses indexed search technology to manage the ever-expanding volume of digital photos and rendered images that pile up in project folders. Finding a photo needed to answer a question or resolve a dispute has never been easier. You can interactively search, filter and group images by date taken, camera model, location and other EXIF properties embedded by digital cameras. Tag images with keywords for future retrieval using the Search function.

Streamline meeting minutes

The Meeting Minutes activity center integrates with Microsoft Office Outlook to ensure that meeting commitments don't slip through the cracks.

It creates, distributes and tracks project meeting agendas and minutes. In addition, you can add action items, RFIs and other open items as discussion topics, and track them across a series of meetings till resolved.

Document sustainable design

Newforma Project Center software provides multiple means to log and report decisions, materials, practices and processes that substantiate claims of sustainable design and construction.

Newforma Project Center modules

Newforma Mobile

Newforma® Mobile is an optional module of the Newforma PIM solution that delivers live project information to popular smartphones, such as the iPhone®, BlackBerry® and Android™ mobile devices, through a mobile-optimized website.

Newforma Contract Management

Newforma® Contract Management is an optional module of the Newforma PIM solution that supports contract and document change management during the construction phase of an AEC project. It provides a standard, streamlined approach for managing submittals, RFIs, document changes, sketch logs, bulletins, addendums, supplemental instructions (ASIs), construction change directives, proposal requests, contract changes, contracts, change order proposals, change orders and punch lists.

Newforma Add-in for Autodesk Revit

The Newforma® Add-in for Autodesk® Revit® is an optional module of the Newforma PIM solution that connects non-graphical information in BIM models to corresponding PIM processes critical to project execution. Doing so allows non-Revit users to manage Revit information such as space planning data and punch lists. It permits the team to better manage the "I" in BIM.

healthcare facilities solutions

"We felt we were losing money each day we delayed implementation... It is clear how Newforma software has increased the efficiency and effectiveness of our firm to the benefit of our staff, our clients and our stakeholders."

Carl Davis
President

"Newforma Contract Management will allow us to automate, link, and track actions and documentation that were formerly managed in unintelligent spreadsheets and word documents."

Mike Potts, EI, CxT
Director of Information Systems

"Newforma Project Center makes it easy to document the evolution of a job by capturing email decision threads and keeping record copies of milestone documents. As a result, in addition to improving client service during the project, we have a definitive reference to give to the owner at handover."

Eric Jones
Chief Executive Officer
