Interior Design
Performing Arts
Transportation
Urban Design

“Newforma software provides considerable advantages on complex, large-scale projects and their numerous potential risk issues.”

PACCAR Hall - University of Washington Foster School of Business;
Seattle, Washington

Challenges?

- Architects and engineers spend 16% to 20% of their time trying to find and recreate information, including the recopying involved in the submittal process.
- There is a very good chance that portions of a submission package will be misplaced or separated from the rest of the submission.

Results?

- The firm saves an average of 220 hours per project following a digital submittals process.
- Paper savings on the average project amount to 52,800 sq. ft.
- It eliminates the need to copy, scan, bundle hardcopy packages for a courier, and file in-progress hardcopies.
