| PROJECT LEAD |  | FULL AUDIT TRAILS FOR DATA ACCESS |  | STATE-OF-THE-ART MOBILE SUPPORT FOR HOW TEAMS WORK |

OUR CUSTOMERS, YOUR PEERS

Part of my job is to collaborate and bring all the information together from all consultants from all disciplines, into one coordinated scheme. The sheer amount of data that we have to deal with the architectural discipline, structural engineering, mechanical and electrical engineering and all peripheral consultants like acoustics and fire and so on; there are huge amounts of information we have to bring together. Managing that information flow can be a nightmare. We had a job that lasted seven years; there was a lot of documentation in seven years, most of that was Outlook. At the end of the project when you-know-what hits the fan, the thought of looking through seven years of emails was frightening. Luckily we had Project Center for two years and it saved us an arm and a leg as far as time is concerned. Project Center search engine is a monster, it is Outlook on steroids. You can match words and find pieces of text in PDFs. You can find anything with a light touch. You don't know it's there, even when you change your folder structure, it's in the background-indexing. It's wonderful.
