

 **NEWFORMA
Project Center**

Newforma® Project Center software makes engineers more effective as they organize project data, collaborate with project team members and manage construction projects from inception to delivery.

**BUILD YOUR BUSINESS**

Manage risk.

Improve productivity.

Respond faster to clients
and partners.

Deliver more
successful projects.

**MANAGE EMAIL, FIND INFORMATION, RESPOND
MORE QUICKLY**

- File email with other project documents.
- Find project emails in seconds, even when they originate from people no longer with the firm.
- Search and find information in more than 200 industry file types, wherever it exists on your network, even when it's in a ZIP file attached to an email.
- Conduct searches in a single project; or in multiple active, archived, and off-line projects.
- Search for international language content.
- Access all project files via one convenient portal, no matter where those files reside on your network, even when managed by Bentley ProjectWise®, IBM FileNet®, or Microsoft SharePoint®.

SHARE FILES WHEREVER YOU'RE WORKING

- Access and upload files wherever your work takes you, whether using a browser at your desk or a mobile device on the go.
- Know who has (and has not) downloaded what, when.
- Be sure of working with the latest shared files.
- Team members in other companies can manage project files and folders without your intervention.
- Real-time synchronization between servers and the cloud keeps data consistent.
- Versioning – the automatic capturing of file histories – makes it easy to restore overwritten files.
- Audit trails and permissioning improve control and mitigate risk.
- When working with other companies using Newforma software, share project information seamlessly using Newforma-to-Newforma connections.

THE NEWFORMA DIFFERENCE

Other software products silo information, ask you to give up applications you use every day, or impose changes on your IT infrastructure. By contrast, Newforma Project Center integrates with your infrastructure and with applications you rely upon, such as email and document management systems; and replaces technology that falls short, such as FTP and generic cloud-sharing services. More importantly, only Newforma software coordinates data in all three locations where you need it: on your servers, in the cloud, and on mobile devices. Regardless of where your data resides, you can see the relationships between your project documents, tasks and people.

IMPROVE PROFITABILITY AS YOU REDUCE RISK

- Spend less time managing action items as you improve team follow-through.
- Expedite final payment by creating self-contained, organized and distributable closeout files.
- Refer to emails and automatically generated audit trails to avoid disputes and support invoices.
- Review and compare documents on-screen.
- View and mark up files with easy-to-use annotation and drawing tools, whether on your desktop, on the web, or on mobile devices.
- Stamp drawings electronically.

BRIDGE THE OFFICE-FIELD DIVIDE TO IMPROVE PRODUCTIVITY

- Download plans, email and other project information to tablets and smartphones using Newforma mobile apps.
- Upload field-captured data to the office (and the rest of your project team) from your mobile devices.

“I like providing the best service in the industry.”

“We bought Newforma Project Center to cut the hours spent on administrative tasks at a time when there’s no room in the budget for wasted effort.”

– *Lumos & Associates*

“At a time when lots of competitors are vying for our clients, I like the idea of providing the best service in the industry.”

– *PCS Structural Solutions*

“I recently had to pull up an old email to resolve a disagreement. I had an email from June 2007 that cleared up the confusion. And I found it while we were on the phone!”

– *BergerABAM*

“We need to search quickly, get the information, get it onto the drawings and get it out of here. When I saw the presentation for Newforma Project Center, I thought, ‘This is what we’ve been looking for.’”

– *Environmental Systems Design*
